The Resolution requests the WHO DC to:

- Strengthen the leadership and advisory role of the WHO in all aspects of the Regional use of medicines.
- Support WHO’s technical support to Member States to establish or strengthen medication policies.
- Promote the development of regional guidelines, policies, and strategies to promote rational use of medicines.
- Support the coordination of regional and national initiatives to promote rational use of medicines.
- Strengthen the coordination of international and national initiatives to promote rational use of medicines.
- Promote the implementation of regional guidelines, policies, and strategies to promote rational use of medicines.
- Strengthen the role of the regional health authorities and national health authorities in promoting rational use of medicines.
- Strengthen the role of the regional health authorities and national health authorities in promoting rational use of medicines.

The WHO global strategy on AMR and rational use of medicines is an important step towards achieving the Sustainable Development Goals. By promoting a comprehensive approach to the prevention and control of AMR, we can protect the health and well-being of people around the world, while ensuring that medicines remain effective for future generations. Let us commit to working together to make rational use of medicines a reality for all.
